

PFAS COMPLIANCE STATEMENT

Per- and Polyfluoroalkyl Substances (PFAS)

Halsit Holdings, LLC dba Abbatron manufactures and supplies electronic and electromechanical components that may incorporate metals, plastics, elastomers, insulation materials, coatings, and other materials obtained from multiple suppliers.

PFAS are a broad class of fluorinated substances used in many industrial applications. Definitions and regulatory requirements for PFAS vary by jurisdiction and continue to evolve.

Based on information reasonably available from our suppliers and our internal product knowledge, PFAS are not intentionally added to most Abbatron products. However, certain products may intentionally incorporate polytetrafluoroethylene (PTFE) or other fluoropolymer materials. PTFE and certain other fluoropolymers fall within broad regulatory definitions of PFAS and, where used, those products should be considered to contain PFAS.

Abbatron does not perform analytical PFAS testing on every product or material and does not maintain complete part-level PFAS composition data for all catalog products unless specifically required by written agreement. Accordingly, we do not represent that every product is universally PFAS-free.

For materials and products not known to intentionally contain PTFE or other fluoropolymers, our PFAS position is based on supplier-provided information and reasonable due diligence. Trace or unintentionally present PFAS, including substances that may result from upstream processing, cannot be independently ruled out without product-specific analytical testing.

Customers are responsible for evaluating the regulatory requirements applicable to their specific product, market, and end use. Product-specific PFAS declarations, analytical testing, or full material disclosure requirements should be established by written agreement at the time of purchase and are subject to the Abbatron Compliance Documentation Policy.

Abbatron will continue to monitor PFAS regulatory developments and supplier information and will update this statement as appropriate.
