

**Compliance Statement for Persistent Organic Pollutants (POP)
EU Regulation (EU) 2019/1021**

Halsit Holdings, LLC dba Abbatron is committed to compliance with applicable environmental regulations, including the control of Persistent Organic Pollutants (POPs) as defined under **Regulation (EU) 2019/1021** and its subsequent amendments.

Persistent Organic Pollutants (POPs) are chemical substances that persist in the environment, bioaccumulate through the food chain, and pose a risk to human health and the environment.

Based on information provided by suppliers and to the best of our knowledge, products manufactured do not intentionally contain substances restricted under the POP Regulation above applicable threshold limits.

As a manufacturer and distributor of electronic components, Abbatron does not directly source raw materials and relies on its supply chain for material composition information.

Abbatron does not perform analytical testing for POP substances on all products and does not maintain full material disclosure at the homogeneous material level unless specifically required by contract.

It is the responsibility of the customer to evaluate the suitability of products for their specific applications and regulatory requirements.

Abbatron will continue to monitor regulatory developments and update this statement as necessary.

Document Revision Date: April 2026

Sincerely,

James A. Sitter

President

Halsit Holdings, LLC dba Abbatron
